

PART NUMBER

PFR12-510

DESCRIPTION

REAR LOWER ARM FRONT BUSH

INSTALLATION GUIDE

Contents (parts per pack):

2 x Polyurethane Bushes 1 x PTFE/Silicone Grease

2 x Stainless Steel Sleeves 2 x Mild Steel Washers

Please read the complete fitting instructions and check package components before fitment. These fitting instructions are to be used as a guide and in conjunction with workshop manual. It is recommended that:

- -all work to be carried out by a licensed technician;
- -all safety precautions adhered to;
- -wheel alignment to be checked and adjusted as required after any suspension work.
- -All fasteners must be tensioned to manufacturer's torque settings.

Fitting Instructions:

- 1. Remove the original rubber bush from the front position of the rear lower arm.
- 2. Clean any dirt and corrosion from the bore of the arm and file off any sharp edges.

Tip: apply some washing up liquid to the polyurethane bush before fitting for ease.

- 3. Push in the polyurethane bush with the smaller chamfered edge being pushed in first into the bore of the arm (Figure 2).
- 4. Apply some of the supplied grease and press in the stainless steel sleeve so that it sits flush.
- 5. Place the mild steel D washer on top, making sure the flat end of the washer faces towards the back of the vehicle.

Note: the bore of the washer and the bore of the sleeve should be aligned, with the D shaped washer being held in the position in figure 1 while being tightened.

6. Refit the rear lower arm back to the vehicle and tension all hardware to manufacturers recommended torque settings.

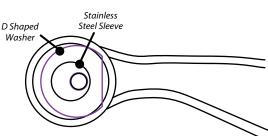

Figure 1 - top view showing how the D shaped washer aligns with the stainless steel sleeve. Hold the D-shaped washer in this position as it is tightened.
